

SCADA PROCESS VALIDATION SOFTWARE 1.9

SCADA PROCESS VALIDATION SOFTWARE 1.9

With **SiOx SCADA and process validation software 1.9** you can control, monitor and validate your processes in a whole new way. The intuitive and graphical user interface lets you overview, edit, validate and analyze your processes as never before.

The process overview window gives a great overview of the current process stage as well as any deviation or alarms. In the trend page, all process variables are plotted against time in real time. The layout of the trend page is highly customizable to fit your specific needs. Data from the process trend page can be exported in .xls (MS Excel) format .

Process reports are stored as pdfs and will automatically be printed after each completed process cycle. Batches can be fed into the system via a barcode scanner or keyboard.

The search function lets the operator find previous reports, alarms and events based on operator name, batch no, alarm, deviation, date etc. The system also comes with an audit trail function where all changes are stored together with ID of operator. Our software and audit trail function comply with 21 CFR part 11.

SiOx SCADA and process validation software is compatible with all of our CO2 machines and applications.

Please contact a sales representative at SiOx machines for more information about **SiOx SCADA and process validation software**.
